1. Tell me about yourself.

A. I am Bollineni Narasimha Naidu from Anantapur, Andhra pradesh. I recently completed my graudation in, B. Tech with specialization of computer science and Business Systems with CGPA of 8.3.

In my final I have done one project on e- Learning platform management in that we used Tools are Power BI, excel, Python, HTML, CSS.

I am passionate and results -driven data Analysties with a strong foundation in Statistical data Analysis, data visualization and problem - solving. I hold a Bachelor's of Technology in Computer science and Bussiness systems, where I developed a deep interest in transforming raw data into actionable insights that support evidence - based decision making.

I also completed an internship where I was responsible for a Preparing reports and dashboards to monitor key performance indicators (kpis) for business terms. I used power BI to a design interactive dashboards that summarized sales trends, customer behavior, and financial performance.

2. Why did you choose a carrer in data Analytics or datascience?

A. I Choosen a career in data Analytics because I have been fascinated by the power of data to uncover patterns, solve problems, and drive better decisions. In today's digital world, organizations generate enormous volumns of data every second, and I believe that the ability to analyze and interpret that data is one of the most valuable skills a professional can have. What excites me most is the opportunity to turn complex, unstructured data into meaningful insights that can shape strategy, improve efficiency, and create tangible impact.

I chose this career because it allows me to make a real difference. whether it's optimizing operations, improving customer satisfaction or supporting sustainability initatives.

- what do you know about our company and why do you want to work here?

A. From my research, I understand that your company has built a strong reputation for innovation, data-driven strategy, and customer-centric solutions. you have established yourself as a leader in leveraging Analytics and technology to improve performance, streamline operations, and deliver exceptional value to your clients. I am particularly impressed by your commitment to integrating modern technologies such as AI, Machine Learn. and predictives Analytics into your Bussiness Model.
What draws me most to at your Organization is the emphasis you place on data as a core sat. I appreciate that your teams don't just collect data - they Analyze it to generate insights that inform real business decisions.
I am confident that my Analytical skills, Technical proficiency, and problem-Solving mindset align with your organizational goals.

4. Describe a time when you faced a challenge in a project and how you handled it.

A. During my internship, I worked on a project that required analyazing customer Purchasing data to identify sales trends. The main challenge I faced was the inconsistency and incompleteness of the dataset. Some records had missing values, duplicate entries and formatting errors. Initially, the results from my Analysis were unreliable because the data quality was poor.
To address this challenge, I first performed a detailed data audit to understand the extent of the issues. I used python's Pandas library and Excel functions to identify and remove duplicates, fill missing values logicaly, and standarize data and text formats. This step alone improved the dataset's reliability significantly.

5. How do you handle tight deadlines or pressure at work?

A. I handle tight deadliness and pressure by maintaining structere, prioritizing effectively, and staying calm under stress. In data analytics, accuracy and attention to detail are essential, so I believe the key is to manage time wisely without compromising quality.

when faced with multiple deadlines, I start by identifying the most critical tasks - the ones that directly impact outcomes or depend on other's input. I create a realistic timeline, breaking large assignments into smaller, manageable goals. This approach helps me maintain momentum and measure progress. I also use tools like trello or excel task lists to track deliverables and deadlines.

6. How do you explain complex data insights to non-technical people?

A. Explaining complex data insights to non-Technical People Stakeholders requires clarity, storytelling and empathy. I start by understanding my audience - their goals, background, the decisions they need to understand based on data. This helps me tailor my communication to their level of understanding.
I avoid technical jargon and focus on the "so what" of the analysis - what the data means, why it matters, and what actions it suggests. I use visuals such as charts, dashboards, and infographics created in PowerBI or Tableau to simplify complex patterns. Visuals storytelling is one of the most effective ways to engage non-technical audience and make insights intuitive.

7. Describe a situation where your Analysis or recommendation Made a Positive impact.

A. In one academic project, my team analyzed customer churn data for a telecommunications company. I was responsible for identifying key factors contributing to customer attribution and recommending strategies to reduce it. using python, I conducted exploratory data analysis and built visualizations that revealed interesting correlations - such as high rates among customers with frequent service complaints and those subscribed to short-term plans.
The professor and industry mentor praised our work for its practical applicability. The project demonstrated how well-analyzed data could lead to actionable insights with real business implications. This experience reinforced my belief in the value of analytics - that behind every dataset lies an opportunity to make measurable, positive impact.

This experience reinforced my belief in the value of analytics - that behind every dataset lies an opportunity to make measurable, positive impact.

8. How do you handle feedback or criticism?

A. I view feedback as an essential part of professional growth. Whether positive or constructive, feedback helps me identify strengths to build upon and areas for improvement. When I receive criticism, I listen actively without learning defensive. I try to understand the perspective behind the feedback and ask clarifying questions if an necessary.

Once I fully understand the input, I reflect on how to apply it effectively. for instance, during a college project, my mentor pointed out that my reports were too detailed and needed more concise summaries for business audiences.

9. What are your short-term and long-term career goals?

A. In the short term goal is to strengthen my practical experience in data analytics by work on real-world projects that involve data cleaning, visualization, and interpretation.

In the long-term goal, I aspire to advance into a senior Analytics or data science role, focusing on predictive analytics and machine Learning. I want to expand my expertise in advanced statistical modeling, AI.

10. What motivates you do your best work?

A. I am motivated by curiosity, impact and continuous improvement. I find it deeply satisfying to uncover insights hidden within data and see how those insights lead to real-world results. The process of transforming raw information into actionable intelligence gives me a sense of purpose and accomplishment.

I'm also driven by the opportunity to solve meaningful problems. Wheather it's improving efficiency, enhancing customer satisfaction, or optimizing performance, knowing that my work contributes to tangible progress keeps me motivated.

Collaboration also inspires me. Working in teams where ideas are shared, challenges are tackled collectively, and achievements are celebrated fosters motivation and engagement.
